Neuroengineering: A multidisciplinary approach combining cognitive neuroscience with engineering to characterize the cortical networks underlying perceptual and cognitive processes, such as rapid decision-making in the human brain. My laboratory pursues both basic and applied neuroscience research projects, with emphasis on non-invasive multi-modal neuroimaging, visual perception, brain-computer interfaces, application of machine learning to analysis of neural data and computational modeling of large neural systems. I am also interested in applications of these methods for better characterizing, understanding and treating psychiatric illness.
